

A ZOOCE Cloud Case Study

Nicolay Consulting Group – Independent Firm

Challenge

Nicolay was moving and they needed to make a decision? Should they take their aging servers with them and build a new server room at the new location?

Or, should they embrace a more cloud centric approach?

If they chose the cloud, would they be able to move their legacy software? Would they be able to transition all of their employees to thin clients? Would this increase productivity and streamline IT spend?

Solution

Nicolay moved offices and they left their server room behind. They moved their entire business to the Zooce Cloud, including their legacy software. In addition, they moved 100% of their workers to thin clients.

Results

- **50% IT Savings Annually**
- **Increased Security**
- **A Truly Mobile and Productive Workforce**

Overview

Nicolay Consulting Group is a full-service company specializing in the planning, design and administration of customized pension plans. Their exclusive client group consists of religious, municipal, school, public service and other tax-exempt organizations.

Nicolay's situation was not unique. They were moving offices and they were faced with a big decision. Should they build a new server room at the new location? Or, should they move all of their business to the cloud?

In-house resources were going to require significant budget allocation upfront while hosted services would not. Nicolay did the math, assessed the technology and opted for a 100% cloud approach.

But, Nicolay had one more concern – they had legacy software that needed to move into their new business cloud as well.

They chose Zooce Cloud Services. As a cloud-based service, Zooce required limited hardware expenditures. They also have a proprietary migration method that ensured Nicolay could move their legacy software to the cloud.
